8. After I finish importing validated data I will get the new background levels in the screening levels table so we can compare A72 and Bakers Bridge to background

- 1) Operations support is going well. Two new people on their way tomorrow and Friday along with two others we have now helping on the data side.
- 2) New Graphs are in under a new Layer called "Routine Sample Locations". This layer has the new graphs from last night. I also took down the others. Waiting for Janine to update the viewer.
- 3) Megan is processing and validating new data from this morning.
- 4) Stream data layer is in.
- 5) Sadie widget is almost updated in the Operations Viewer
- 6) Per Randy's request Region 9 is using Sadie and I have included that in our Gold Mine Sadie application. Janine is going to see if she can get Region 6 in.
- 7) Well monitoring/mapping is going well with our online spreadsheet and coordination with the GIS group at La Plata.

Subject: Data Priorities

1. Support OPS and keep Janine in the loop.
2. Update the viewer with the new graphs from last night. Go ahead and take the others down even before you start developing.
3. Keep processing and validating the data.
4. Where do we stand on those stream segments? Let's make them all yellow for now.
5. Give me an assessment of development costs to fully deploy SADIE in the R6 environment.

Dan Burgo, R1 DATA Team member will be on the ground later today. he will spend about 1/2 time imbedded at Area Command to shepherd the data thing across all 3 regions (the rest of his time he will be EUL in the R8 IMT).
